[GitHub](#) | [Portfolio](#)

IT Analyst with 3+ years supporting enterprise healthcare systems, specializing in automation, business workflows, and production support. Skilled in scripting (PowerShell, Batch, UC4, Python), documentation, and security/compliance (HIPAA, NIST); familiar with HL7-based integrations. CompTIA Security+ certified; completing a BAS in Information Systems Technology.

EDUCATION/CERTIFICATIONS

Bachelor of Applied Science in Information System Technology

Santa Fe College (Graduating Spring 2026)

Associate in science, Programming & Analysis

Santa Fe College

Computer Programming Specialist Certificate

Santa Fe College

CompTIA Security+ (Certified 2025, Active)

Work Experience

IT Operations Analyst

Aug 2022 – Present/ 40 Hours

UF Health Shands

System Administration & Automation:

- Design and support *automation scripts* in PowerShell, UC4, and Batch job management for file transfers, archiving, and enterprise workflow execution.
- Facilitate User Acceptance Testing (UAT) for new/updated UC4 jobs with cross-functional teams, validating requirements and user expectations.
- Assists with *patching, upgrades, and deployment* of enterprise systems, validating configurations and documenting outcomes to support vulnerability remediation.
- Serves as primary analyst for UC4 test monthly reboots and backup analyst for UC4 production monthly reboots, under established change-control procedures.

Documentation & Process Management:

- Documentation of business processes, SOPs, and system configurations for audit and knowledge transfer while also maintaining accurate records by revising outdated or changed protocols to ensure operational accuracy and compliance that adheres to department standards across shifts and locations for audit readiness and future issue resolution.
- Collaborate with cross-functional teams to implement and track system changes, document workflows and configurations for audit and system improvement purposes.

Data Center Operations:

- Executed end-to-end **server and hardware commissioning/decommissioning** of hardware, including power validation, dcTrack updates, archival, physical rack installs/removals, and coordination with gatekeepers and infrastructure teams.

- Enforce physical security policies and protocols by managing visitor access, conducting visual inspections and live camera monitoring.
- Monitor and analyze critical hospital systems using tools such as Zabbix, *identifying, investigating and escalating alerts* for resolution to minimize downtime and maintain 24/7 uptime for patient-facing services.

After-Hours Help Desk Support:

- Provides Tier-1 Support *technical support* to end-users, including password resets, unlocking accounts, and verifying group policies using *Active Directory* and the organization's Identity and Access Management (IAM) portal to determine user access permissions, supporting least-privilege and identity governance across hospital systems.
- Troubleshoots hardware and software issues, and ensuring the security of IT systems, resolving 87% of issues on first contact.

Patient Transport Dispatcher

Aug 2017 – Aug 2022/ 30 Hours

UF Health Shands

Patient Transfer Operations Management & Optimization:

- Coordinated over 160 daily patient transports using Epic, ensuring seamless movement across hospital departments.
- Led a team of 8–10 transporters, enforced protocols, maintained records, and produced performance reports to uphold safety and operational standards.

Training Development & Improvement:

- Designed and implemented transport *training programs* to improve onboarding and protocol compliance.
- Monitor and analyze patient transport data to identify trends and areas for improvement.

TECHNICAL PROFICIENCIES

Operating Systems/Environments: Windows, Linux

Scripting & Automation: Batch File & PowerShell Scripting, Python, UC4 (Automic Automation)

Database: MySQL, Postgres (Terminal & CLI use)

Virtualization: Oracle VM VirtualBox

Version Control: Git/GitHub

Technical Projects

Linux System Administration: Use Ubuntu as primary OS for laptop to strengthen command-line, package management, and system configuration skills. Built and manage Linux VMs to practice user management, service setup, and backups.

Azure Cloud Security Lab (Coursework, Spring 2025): Deployed Azure VMs, configured RBAC, and applied basic security policies (firewall, access restrictions, monitoring) to gain hands-on cloud security experience.

PostgreSQL/MySQL Database Management (Coursework & Lab Practice): Installed and configured *PostgreSQL and MySQL* on local Linux and windows environments. Created and managed databases using CLI tools; performed CRUD operations, user permission setups, and basic *SQL queries* for reporting and data handling.
